Milestone Presentation

My Neighbor's Kitchen

end food waste. locally.

40% of all food grown in America is wasted. Meanwhile, 1 in 7 Americans are food insecure. My Neighbor's Kitchen tackles food waste at the source: local communities. Instead of throwing out excess food, make it available to hungry people around you. Don't go hungry when you can leverage the resource you have just a few feet away - the kitchen next door.

Outline

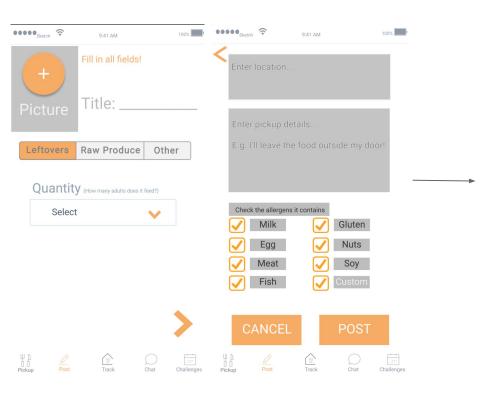

- Heuristic Evaluation Results
- Revised Design
- Prototype Status
- Demo

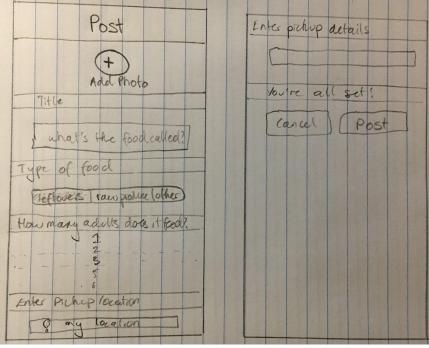

Heuristic Evaluation Results: Post

Post page:

- Make it one scrolling form
- Need positive reinforcement: "Congrats your meal was posted!"
 and shows you your personal success → popup modeled after Uber
- Keep Post/Cancel buttons fixed position
- Lack of confirmation that the food was posted

Revised Design: Post

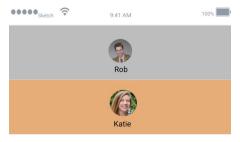

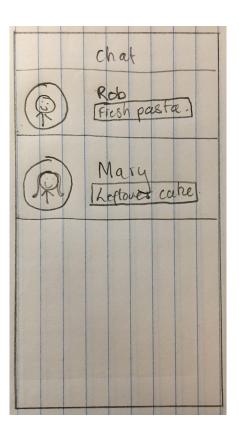

Heuristic Evaluation Results: Chat

Chat page:

- Food item needs to be linked in the conversation thumbnail
- Image on the left, name and food title
- Automatically generate chat when someone claims your food

Revised Design: Chat

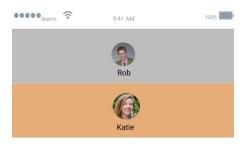

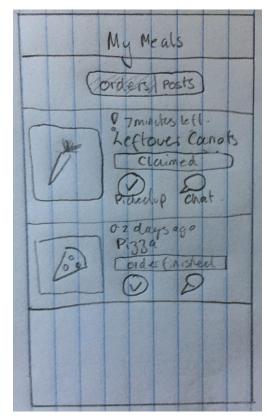

Heuristic Evaluation Results: My Meals

My Meals page (formerly Track):

- Users were confused between posted and picked up items
- Need ability to edit/remove a posted item
- Need a way to unclaim an item
- Toggle between my orders and my posts
- Most recent at top (i.e. this order in progress)
- Need an 'unclaim' button

Revised Design: My Meals

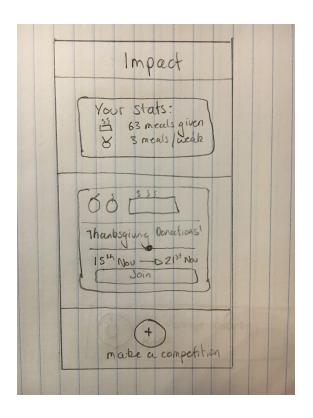

Heuristic Evaluation Results: Impact

Impact Page (formerly 'Challenges'):

- Purpose of 'challenges' is currently unclear
 - Moving from 'events' to 'impact statistics'
- Format: name and progress bar on separate lines to reduce clutter
- Push notifications once you join a challenge
- Start and end date
- Needs to be more interactive and action-oriented i.e. prompt the user rather than displaying static page
- Explain rules to new users
- Create a personal challenge that is ongoing for you to track your stats

Revised Design: Impact

Using Exponent XDE and React Native

Implemented:

- Navigation between tabs
- Map interface for pickup
- Post form

Unimplemented:

- Impact page
- Chat page
- My Meals page
- Pickup list functionality

Monday 12/5:

- Pickup list functionality
- Chat page
- My Meals page

Thursday 12/8:

- Impact page
- Aesthetic touches

Wizard of Oz:

- Hard-coded chat system
- No registration system
- Fake accounts for neighbors in challenges
- Can't actually save pictures from the camera

Hard Coded Data:

- Pre-set data for available food to pick up
- Pre-set data for addresses
- Chat responses

Summary

Overall, the Heuristic Evaluation results gave us important ideas in improving our design. We have made interface changes that allow for a smoother workflow and have strived to remove confusing aspects of every task.. So far, we have implemented the "Post" task of our Exponent App, and in the coming days, will be implementing the "Pickup," "My Meals," "Impact," and "Chat" functionalities.
